WARNING! Always wear gloves and protective goggles when working on the wheels.

PRE-RIDE INSPECTION AND GENERAL SAFETY RECOMMENDATIONS

WARNING!

To avoid an accident, personal injury or death:

• Ensure that the bike is in good condition and check the inflation pressure before every ride.

• Make sure your cycling helmet is properly secured and tight. Check that the straps are fitted correctly, and make sure they are not too tight or too loose. The helmet should fit snugly and not move on your head when you shift your weight from one side to the other.

• Handlebars and brakes should be clean and free of debris. Check that the brake levers are not damaged or misaligned. Ensure that the brake cables are properly adjusted and not frayed.

• Ensure that the tires are in good condition and properly inflated. Check for cuts, punctures, and flat spots. Make sure that the tread depth is adequate for the current weather and terrain conditions.

• Check that the derailleur cables are not frayed or damaged and that the shifters operate smoothly.

• Inspect the chain for kinks, breaks, and excessive wear. Make sure that the chain is properly cleaned and lubricated.

• Check the cranks and pedals for damage or loose bolts. Ensure that the pedals are securely mounted on the crank arms.

• Check the gear teeth for any signs of wear or damage.

• Check the brake shoes for wear and proper contact with the brake pads.

• Check the chainring and cassette for any signs of wear or damage.

1. TECHNICAL SPECIFICATIONS

FRONT 110 mm - REAR 150 mm

OPERATING PRESSURES

- the inner tube must be filled with a value of 0.8 - 1 bar (8 - 10 W).

Never use plastic or rubber stoppers or butyl seating compound (penetrants - solvents - water-soluble).

2. TYRES

- use a tube and use Fulcrum rims. A special care must be paid between the tire and the rim.

- the use of rims made of aluminum and magnesium is not recommended. These rims have been specifically designed for use with Fulcrum tires.

3. BRAKES

- When purchasing a new bicycle, it is important to check that the manufacturer has used high-quality materials and components. The use of low-quality materials can result in poor braking performance and reduced longevity.

4. MAINTENANCE

- Always keep the bike clean and dry to prevent rust and corrosion. Use a soft cloth to wipe off any dirt or debris from the bike. Avoid using water or solvents to clean the bike, as these can damage the paint.

- Check the brake pads regularly and replace them if they are worn or damaged.

- Check the gear cables and adjust them if necessary.

- Check the chain for wear and replace it if necessary.

- Check the suspension components for wear and replace them if necessary.

- Check the wheel axles for tightness and replace them if necessary.

5. PERIODICAL WHEEL MAINTENANCE

- Fulcrum Wheels S.r.l. recommends that you contact a specialized mechanic for all the assembly, disassembly, and service procedures. Choose the one that is right for you, based on your needs and preferences.
